

LEAD PAINT: BAD IN SCHOOLS, HOSPITALS, APARTMENTS OR ANYWHERE CHILDREN MAY BE PRESENT.

Many contractors and maintenance workers who paint base on the job for years believe they know all about the dangers of lead and the precautions necessary for working with lead paint. Others think lead paint poisoning only went away years ago. It didn't.

That's why you need to know the facts about lead paint and how disturbing it leaves serious health risks to the people in your building, especially children.

If your pre-1978 hospital, child-care facility, school or residence has lead paint, it is important to hire a Lead-Safe Certified contractor and have him make sure your team maintenance staff is doing the right thing.

THE TRUTH ABOUT LEAD PAINT POISONING.

Lead paint is an invisible danger. Here are some facts about lead paint poisoning that everyone should know:

- A million kids are affected by lead paint poisoning with some level of irreversible damage such as lower intelligence, learning disabilities and behavioral issues.
- New cases of childhood lead paint poisoning are diagnosed every year. Many more could go unreported.
- Recent research shows that new cases can be directly linked to renovations where the work environment was inadequately controlled.
- Adults exposed to lead paint can suffer from high blood pressure, headaches, dizziness, decreased motor skills, fatigue and memory loss. Even small levels of exposure to lead paint can harm.
- It's not just lead paint chips that poison. Contamination can be caused by only a little bit of lead dust that is easily inhaled by anyone who inhales or ingests it.
- Once absorbed, it's far flung and can never be removed.

Building Managers: Make sure you or your contractor is Lead-Safe Certified.

WHERE DOES THE LEAD DANGER COME FROM TODAY?

In earlier decades, the fear of children ingesting paint chips may be the main concern when it came to poisoning. But since then, research has shown that the most common way to get lead in the body is from inhaling or ingesting microscopic dust.

Renovation creates that dust. Common renovation activities, like sanding, cutting and demolition, can create hazardous lead dust and chips. Proper work practices can protect the people in your building, especially children, from this dust.

Even for small jobs, the keys to use lead-safe work practices such as containing dust inside the work area, using dust-minimizing work methods and conducting a careful cleanup, also insure keeping people off the work area. Most important, it means making sure that anyone who does work in your building is Lead-Safe Certified.

HOW DO I CHOOSE THE RIGHT CONTRACTOR?

As a property manager or person in the position of authority to choose who renovates your hospital, child-care facility, school, or apartment, it is your responsibility to choose a contractor who is Lead-Safe Certified.

Here are a few helpful tips:

- Ask if the contractor is trained to perform lead-safe work practices and ask to see a copy of their EPA training certificate.
- Make sure your contractor can explain clearly the details of the job and how they will minimize lead hazards during the work process.
- Ask what lead-safe methods will be used to set up and perform the job in your hospital, child-care facility, school or apartment.
- Ask for references from at least three recent jobs involving buildings built before 1978, and speak to each personally.
- Arrange to have the contractor to clear about how the work will be set up, performed and cleaned.

You can verify that a contractor is certified by checking the EPA website at www.epa.gov/lead/cert or by calling the National Lead Information Center at 1-800-424-LEAD (5323). You can also ask to see a copy of the contractor's firm certification.

DOES MY STAFF HAVE TO BE LEAD-SAFE CERTIFIED?

Federal law requires that if you or someone on your staff is performing the work you must be Lead-Safe Certified and your staff trained in lead-safe work practices. That, you could face tens of thousands of dollars in fines. Plus, you put the health of yourself, your workers, and your customers at risk, which could result in lawsuits.

These work practices include:

- Containing the work area
- Avoiding renovation methods that generate large amounts of lead-contaminated dust.
- Cleaning up thoroughly.

GETTING YOUR LEAD-SAFE CERTIFICATION.

- To become certified, individuals must attend a full-day Renovating, Repair and Painting Rider Course. The price for this course is set by private trainers accredited by the EPA. To find an accredited trainer near you, visit www.epa.gov/lead/cert or call 1-800-424-LEAD.
- You or your staff also needs to register with the EPA and pay \$100 to receive official certification.
- To help you through this new regulation, there is a wealth of downloadable support information on our website: www.epa.gov/lead/cert.
